

# Team Meetings

**Date:** Feb 1st 2022

**Attendees:**

Cody Tyerman  
Cassie Peters  
Gerald Promchuakaew  
Jason Hsiao

**Absent:** None

## 1. Project

**Progress**

- Code for the dashboard has been organized and some bugs in the js file were fixed.
- The Google Maps and Google GeoCoding API's have been set up to work with healer location data in the SQL database and to map them.

**Blockers + Surprises**

- Understanding some PHP syntax has been a bit tricky this week. I've had to relearn a lot of it which made debugging tricky.
- XAMPP needed updated administrator credentials for it to work on all our systems.

## 2. Learning Activity

- Cody's is going to continue working on implementing the healer profile/scheduling page and also implementing Google Maps instead of OpenMaps.
- Cody is also going to work on encrypting user data on the backend database.
- This week Cassie finished using data from MySQL to populate the google maps api with geo-coordinates for healers. This upcoming week Cassie will be adding the html and css for the page and making it look like the figma design.
- Gerald has the payment API setup but is figuring out how to integrate our mysql data to Stripe. We will also need a new account and new api key later for our client because it is being tested on his own personal account right now.
- Jason has finished organizing the code for the dashboard. He will start working on the booking system this week. The goal is to finish the layout and basic look of that page.

## 3. Plan

**Task for this week:**

Start working on the booking feature page and decide which api will be implemented. Finish the front end for the mapping page and move on to implementing the sign up page.

**Learning activities proposed for this week:**

- Learn UX best practices for sign up pages in terms of what data to ask for, how to ask for that data, and how to organize the sign up page structure.
- Read up on useful features that Google services offer.
- Discuss new meeting times for the groups and the client since they have been too inconsistent these last two weeks.

**Goals for next milestone:**

- 1) The whole website is functional including all the features (mapping, payment, and user functions all work).
- 2) The website is professional looking and feeling (clean mobile and web layout with consistent branding and themes).
- 3) We have determined a hosting plan for the site that meets the clients financial and technical restraints.

((THE GOALS ARE STILL THE SAME))
