

Team Meetings

Date: Jan 19th 2022

Attendees:

Cody Tyerman
Cassie Peters
Gerald Promchuakaew
Jason Hsiao

Absent: None

1. Project

Progress

- Created the first prototype for the front end healer search page. Client side input validation was added to the client login page. Geolocation handling is almost complete and just needs to be added to guest account objects in the database.

Blockers + Surprises

- Decided against using OpenMaps API because it does not support location auto-complete for text fields. Therefore, we are going to use Google maps but need to get a greenlight from the client due to billing.
- Had difficulties directing the links on healers on the healer search page to their associated healer profile page. I am going to get assistance from somebody I know who likely knows how to fix this issue.

2. Learning Activity

- Cody's is going to move onto implementing the healer profile/scheduling page and also implementing Google Maps instead of OpenMaps.
- Cassie is going to work on the finishing touches for the UI/UX and assist with Gerald's issue discussed below. Cassie is also starting to code the map functionality for the site using googles map API
- Gerald is going to try and resolve an issue with MySQL when setting up the localhost server on each of our machines as well as do research on payments APIs for our website.
- Jason is going to refactor the JavaScript code with jQuery to make it more readable and scalable. Also he will do some research on the booking feature.

3. Plan

Task for this week:

Add password encryption for the database. Discuss how we will implement the payment system (Stripe vs. PayPal). Get the code running perfectly on every group members' machine. Complete the Figma project.

Learning activities proposed for this week:

- Overwriting the current vanilla JavaScript code with jQuery code.
- Read up on useful features that Google services offer.

Goals for next milestone:

- 1) The whole website is functional including all the features (mapping, payment, and user functions all work).
- 2) The website is professional looking and feeling (clean mobile and web layout with consistent branding and themes).
- 3) We have determined a hosting plan for the site that meets the clients financial and technical restraints.

((THE GOALS ARE STILL THE SAME))
