

Team Meetings

Date: Feb 9 2022

Attendees:

Cody Tyerman
Cassie Peters
Gerald Promchuakaew
Jason Hsiao

Absent: None

1. Project

Progress

- Code for the dashboard has been organized and some bugs in the js file were fixed.
- Cassie built landing, and map pages and the nav-bar and has styled them according to the UX specifications.
- Discussed migrating front end code over to React so that it is easier to connect the API's we need.

Blockers + Surprises

- Connecting the front end with the back end has been tough. CORs has proven to be a challenge to work around. We still need to find a safe way to manage user data between the two.
- XAMPP needed updated administrator credentials for it to work on all our systems.
-

2. Learning Activity

- Cody is going to continue working on implementing the healer profile/scheduling page and also implementing Google Maps instead of OpenMaps.
- Cody is also going to work on encrypting user data on the backend database.
- Cassie will continue to learn about front end design, the use of reusable components, how to build out a PHP rest API and how to connect it with a front end
- Gerald has the payment API setup but is figuring out how to integrate our mysql data to Stripe. We will also need a new account and new api key later for our client because it is being tested on his own personal account right now.
- Jason started on the booking page last week. He will continue on implementing the style and the function for the page.

3. Plan

Task for this week:

- Keep working on the booking page. Finish the front end for the mapping page and move on to implementing the sign up page.

- Build out the user system for the front end that imports user data from the PHP rest API and dynamically populates user and healer data on the app

Learning activities proposed for this week:

- Learn about best practices for managing requests between a front end and a PHP rest API to save ourselves a headache down the line
- Read up on useful features that Google services offer.
- Discuss new meeting times for the groups and the client since they have been too inconsistent these last two weeks.

Goals for next milestone:

- 1) The whole website is functional including all the features (mapping, payment, and user functions all work).
 - 2) The website is professional looking and feeling (clean mobile and web layout with consistent branding and themes).
 - 3) We have determined a hosting plan for the site that meets the clients financial and technical restraints.
- ((THE GOALS ARE STILL THE SAME))
