Team Meetings

Date: Jan 26th 2022

Attendees:
Cody Tyerman
Cassie Peters
Gerald Promchuakaew
Jason Hsiao

Absent: None

1. Project

Progress
- Google Maps API key has been created and linked with the application and we are currently working on connecting data from the SQL DB to the map.

Blockers + Surprises
- Google Maps API is customizable in appearance! This is a pleasant surprise and may let us create a more homogenous user experience on the site
-

2. Learning Activity

- Cody's is going to continue working on implementing the healer profile/scheduling page and also implementing Google Maps instead of OpenMaps.
- Cody is also going to work on encrypting user data on the backend database.
- Cassie has set up the google map's api and connected it to the woo woo network. This week Cass is trying to pull user location data from MySQL and automatically map it.
- Gerald is working on implementing Stripe payment api into our website and connecting our MySQL database to Stripe so that we can send/receive payment data from users.
- Jason has finished some pages and he is going to finish up refactoring other pages and start working on the booking feature. He will also work on the presentation on Friday.

3. Plan

Task for this week:
Add password encryption for the database. Clarify with the client how the payment system should be integrated.Test out GitStats for closed issues because last week it did not detect certain tags on closed issues. Complete the Figma project. Complete the presentation.

Learning activities proposed for this week:

- Overwriting the current vanilla JavaScript code with jQuery code.
- Read up on useful features that Google services offer.
- Search up useful apis for the booking feature.

Goals for next milestone:
1) The whole website is functional including all the features (mapping, payment, and user functions all work).
2) The website is professional looking and feeling (clean mobile and web layout with consistent branding and themes).
3) We have determined a hosting plan for the site that meets the clients financial and technical restraints.
   ((THE GOALS ARE STILL THE SAME))
